General Manager's Message and Commitment

“At Yada Global, we believe that economic growth, environmental responsibility, and social benefit are mutually reinforcing elements. In conducting our operations, we adopt the preservation of natural resources, the fight against climate change, resource efficiency, and the principles of sustainable development as an integral part of our corporate governance approach. We act with the awareness that leaving a more livable world for future generations is not merely an environmental responsibility, but also an ethical and corporate obligation.

Through this Environmental and Sustainability Policy and Action Plan (2026–2030), we commit to systematically reducing our environmental footprint, utilizing energy and natural resources efficiently, minimizing waste generation, supporting the circular economy approach, and contributing to national and international sustainability goals. We accept it as a fundamental principle to comply with applicable environmental legislation across all our activities, to manage environmental risks effectively, and to continuously improve our environmental performance.

At Yada Global, we believe that we can achieve our sustainability goals only through the collective contribution of our employees, executives, consultants, business partners, and all stakeholders. In line with this, we adopt raising environmental awareness, encouraging sustainable business practices, and decisively implementing the targets set forth in this policy as a corporate commitment. We will continue to regularly monitor, measure, and continuously enhance our environmental performance.

”

Cevat Üçüncüoğlu

Founder / General Manager

Yada Global Bilişim Planlama Proje Pazarlama İnşaat Sanayi ve Ticaret Limited Şirketi

1. Executive Summary & Commitment to Global Frameworks

1.1. Corporate Mandate & Alignment of Values

This Environmental and Sustainability Policy & Action Plan (hereafter the "**Policy**") constitutes a legally binding corporate charter formally ratified by the **General Assembly** of Yada Global Bilişim Planlama Proje Pazarlama İnşaat Sanayi ve Ticaret Limited Şirketi (hereafter "**Yada Global**" or the "**Company**"). This Policy governs all operational units, consulting divisions, joint ventures, and value-chain partners of the Company. Compliance with the environmental thresholds, digital optimization rules, and labor protocols established herein is maintained through structured **compliance monitoring, continuous internal auditing, and deep values alignment** across all employees, contractors, and suppliers. The **General Assembly** is tasked with overseeing the integration of these sustainability principles into daily operations, utilizing proactive risk management and advisory frameworks to foster a culture of shared responsibility and ecological excellence.

1.2. Convergence with Global Sustainability Frameworks

To qualify for premier international project financing, public procurement, and academic-corporate research partnerships, Yada Global binds its digital planning and consulting workflows to the global consensus of the following environmental and social frameworks:

- **The Paris Agreement:** The Company aligns its carbon management targets with the scientific goal of limiting mean global temperature increases to **1.5°C** above pre-industrial levels. All digital planning assets and project proposals must undergo a climate compatibility assessment to prevent locking in carbon-intensive infrastructure.
- **United Nations Sustainable Development Goals (SDGs):** Operational targets and client advisory workflows are mapped directly to the 17 SDGs, with specific emphasis on **SDG 9** (Industry, Innovation, and Infrastructure), **SDG 11** (Sustainable Cities and Communities), and **SDG 13** (Climate Action).
- **UN-Habitat & Resilient Cities:** All urban design, digital planning, and spatial master plans executed by Yada Global must structurally integrate the UN-Habitat guidelines on sustainable, compact, and socially inclusive urban ecosystems.

1.3. Prioritization of International ESG Due Diligence Standards

To maintain eligibility for international development tenders and transnational research grants, Yada Global maintains strict, proactive alignment with the following ESG frameworks:

- **European Commission & Horizon Europe:** This Policy is structured to satisfy the **Do No Significant Harm (DNSH)** principle under Article 17 of the EU Taxonomy Regulation. The Company's economic activities in IT and planning must make a substantial contribution to at least one of the EU's six environmental objectives (Climate Change Mitigation and Climate Change Adaptation) while causing no significant harm to the remaining objectives (water protection, circular economy transition, pollution prevention, and biodiversity restoration). Compliance with these criteria is a mandatory prerequisite for Yada Global to secure funding under the **Horizon Europe** research and innovation programme. The Company also aligns its non-financial disclosures with the Corporate

Sustainability Reporting Directive (CSRD) and Corporate Sustainability Due Diligence Directive (CSDDD) under simplified SME disclosure pathways.

- **World Bank Group (IBRD/IFC):** The Company adopts the World Bank's Environmental and Social Framework (ESF) and the IFC Performance Standards, conducting environmental and social screening for all project proposals.
- **UNDP & OECD Impact Standards:** Corporate operational impact is measured using the OECD-UNDP Impact Standards for Sustainable Development Financing, prioritizing human rights, decent work standards, and systemic accountability.
- **EBRD Performance Requirements:** All spatial project development and consulting services comply with the EBRD's Environmental and Social Policy, emphasizing resource efficiency, biodiversity conservation, and decent work standards.

1.4. Support for Turkey's National Compliance Roadmap

While prioritizing international frameworks to satisfy global due diligence, Yada Global binds its domestic Turkish operations to the national compliance targets of the Republic of Turkey:

- **Turkey's 2053 Net Zero Target:** The Company's corporate advisory and spatial planning strategies are aligned with Turkey's legally mandated target of achieving net-zero greenhouse gas (GHG) emissions by **2053**.
- **The 12th Development Plan (2024-2028):** The Company's business strategies, specifically regarding green digital transformation, technical training, and high-value-added services, are harmonized with the goals of the 12th Development Plan.
- **Turkish Climate Law & Voluntary Carbon Markets:** As a high-tech IT, consulting, and urban planning SME, Yada Global is **not a direct mandatory entity** under the upcoming Turkish Emissions Trading System (ETS). However, the Company **actively monitors voluntary carbon markets** and aligns its specialized advisory services to **help clients successfully navigate and adapt** to the upcoming Turkish pilot ETS, slated for rollout in **2026**.
- **2nd National Energy Efficiency Action Plan (2024-2030):** In accordance with national targets, Yada Global mandates a **30% energy intensity reduction** across all its rented commercial office spaces and operational facilities by 2030.

1.5. Structural Governance & Audit Readiness

To ensure this Policy is audit-ready and legally defensible, Yada Global institutes a cross-functional **ESG Steering and Governance Team** under the direct authority of the **General Assembly**. This team is tasked with:

1. Operating a continuous Environmental and Social Management System (ESMS) that integrates ESG risks into the Company's overall enterprise risk management framework.
2. Conducting annual greenhouse gas (GHG) emissions monitoring, reporting, and verification (MRV) in accordance with international auditing timelines.
3. Subjecting all corporate non-financial statements and EU Taxonomy-alignment KPIs to independent, third-party external assurance audits prior to disclosure to shareholders and clients.

2. Green IT & Circular Economy

2.1. Mitigating the Digital Footprint

The global information technology ecosystem contributes approximately **3-4% of total greenhouse gas emissions**. Yada Global, as a digital services and planning company, recognizes its responsibility to co-optimize performance, scalability, and environmental sustainability across the entire lifecycle of its IT operations. The Company hereby declares that it will transition from carbon-blind computing to a carbon-aware, resource-optimized, and lifecycle-conscious digital model.

2.2. Sustainable, Renewable-Energy Cloud Hosting

Yada Global mandates that 100% of its corporate website, software-as-a-service (SaaS) products, testing environments, and digital Twin simulations be hosted exclusively on carbon-neutral data centers:

- **Power Usage Effectiveness (PUE) Threshold:** The Company will not enter into agreements with cloud hosting or colocation providers whose facilities do not demonstrate a verified Power Usage Effectiveness (PUE) of **1.15 or lower**. This aligns with the highest efficiency standards of the European Code of Conduct on Data Centre Energy Efficiency.
- **24/7 Carbon-Free Energy Matching:** Hosting providers must demonstrate verified 24/7 matching of electricity consumption with local renewable energy sources, rather than relying on annual green energy offsets.
- **Advanced Thermal Management:** Preference must be given to hosting providers utilizing state-of-the-art liquid or immersion cooling systems over traditional energy-intensive forced-air cooling.

2.3. Green Coding & Algorithmic Carbon Minimization

The Company establishes the **Yada Green Coding Standard**, a mandatory software engineering framework designed to minimize CPU utilization, memory allocation, and database transaction energy overhead:

- **Algorithmic Optimization:** Software development teams must prioritize algorithmic efficiency, systematically analyzing code to reduce both time and space complexity.
- **Data Structures & Memory Management:** Developers must utilize memory-efficient data structures and implement active garbage collection and memory leak detection to avoid hardware utilization bloating.
- **API & Transaction Efficiency:** Unnecessary external API calls, background execution loops, and database queries must be deprecated. Single-call batch operations and localized caching must be implemented by default to reduce data movement energy.
- **Carbon-Aware Scheduling & Workload Shifting:** High-compute software processes, such as rendering, batch compiling, and digital twin model training, must utilize carbon-aware scheduling tools. These workloads must be shifted dynamically to physical hosting regions experiencing low grid carbon intensity or run during off-peak hours.
- **Observability Stack:** The software engineering teams will implement "GreenOps" observability dashboards to measure and report the energy consumed per transactional execution or the carbon footprint of each API call.

Green IT Infrastructure and Liquid Immersion Cooling Lifecycle Model

2.4. Global E-Waste Circularity & Hardware Life Extension

Yada Global prohibits the disposal of retired IT equipment, office electronics, and telecommunication hardware in municipal waste streams. The Company mandates a strictly monitored, closed-loop circular IT asset management policy:

- **Design for Repairability & Modular Procurement:** Procurement departments must select IT hardware based on modularity, repairability, and ease of component upgrade. Preference is given to manufacturers providing published Lifecycle Assessments (LCAs).
- **Hardware Life Extension:** The corporate hardware lease and upgrade schedule is extended to a minimum of 5 years. If hardware must be decommissioned, it must be routed through the following circular hierarchy: (1) internal repurposing, (2) component-level refurbishing, (3) donation to educational institutions, or (4) certified materials recovery.
- **Audit-Ready E-Waste Recycling:** If an asset is determined to be non-functional, it must be processed by an ISO 14001 and ITU-T compliant recycling partner. The partner must issue a certified "Destruction and Circular Material Recovery Certificate" specifying the precise weight of precious and rare earth materials recovered, ensuring zero-waste-to-landfill verification.

2.5. Data Efficiency & Storage Optimization

Storage infrastructure energy footprint is minimized through active data management protocols:

- Mandatory compression and deduplication at scale to reduce physical disk space footprint.
- Enforcement of data retention policies that archive inactive data onto high-efficiency cold-storage object storage tiers, reducing active spindle runtime.

3. Data-Driven Resilient Urbanism

3.1. Proactive Climate-Resilient Urban Master Plans

Yada Global, through its planning and project development divisions, is committed to designing climate-resilient urban and regional master plans. In strict compliance with the climate change adaptation criteria of the EU Taxonomy, the Company mandates that all spatial projects initiate with a robust, science-based **Climate Risk and Vulnerability Assessment (CRVA)**:

- **Multi-Scenario Vulnerability Analysis:** The CRVA must evaluate potential physical climate hazards using state-of-the-art climate projections aligned with the Intergovernmental Panel on Climate Change (IPCC) reports.
- **Integration of Adaptation Plans:** For every master plan where significant physical risks are identified, Yada Global must construct a coherent Adaptation Plan. This plan must outline specific, cost-effective engineering and nature-based solutions (e.g., green roofs, sustainable urban drainage systems, bio-swales) to mitigate the identified hazards prior to project execution.

3.2. GIS and Digital Twin Geospatial Optimization

Yada Global leverages advanced Geographic Information Systems (GIS) and Digital Twin simulations to achieve hyper-optimized, low-carbon spatial planning:

- **Geospatial Simulation:** By integrating real-time environmental IoT data and high-resolution spatial datasets into Digital Twin models, Yada Global simulates local wind patterns, thermal islands, and stormwater runoffs. This data is used to optimize building orientations, maximize natural ventilation, and reduce active heating/cooling loads.
- **Carbon-Optimal Logistics:** Digital Twin routing algorithms are deployed during the construction planning phase to simulate and minimize heavy vehicle traffic, reducing Scope 3 transportation emissions and localized particulate pollution.

Digital Twin Geospatial Urban Optimization and RCP 8.5 Climate Hazard Adaptation

3.3. Structural Preservation of High-Biodiversity Ecosystems

In strict alignment with the "Do No Significant Harm" (DNSH) criteria for Biodiversity and Ecosystem Protection under the EU Taxonomy and World Bank standards, Yada Global enforces **a strict corporate mandate for land-use preservation:**

- **Prohibition of Cropland and Wetland Conversion:** The Company prohibits any new construction, master plans, or spatial designs located on fertile arable land, cropland with moderate-to-high soil fertility, continuously forested areas (canopy cover >30%, trees >5m), or protected wetlands.
- **UNESCO & Protected Area Safeguards:** All projects located in or near UNESCO World Heritage sites, Key Biodiversity Areas (KBAs), or designated national parks must undergo a site-specific ecological appropriate assessment prior to development consent.
- **Biodiversity-Enhancing Design:** Every master plan must explicitly designate a minimum of **20% of the project area** as native green infrastructure, utilizing species-diverse, drought-tolerant vegetation to support local insect, bird, and small animal habitats.

3.4. Sustainable Water and Wastewater Infrastructure

All master plans designed by the Company must incorporate the EU Taxonomy DNSH criteria for sustainable water and marine resource protection:

- All sanitary infrastructure must feature high-efficiency water appliances. WCs and flushing cisterns are restricted to a maximum full-flush volume of 6 liters and a maximum average flush volume of 3.5 liters.
- Stormwater must be captured, treated, and reused on-site for landscape irrigation and district heating/cooling utilities.

3.5. Structurally Integrated Social Inclusion & Environmental Literacy

Yada Global's spatial planning and digital twin workflows structurally integrate "social inclusion" as a foundational engineering parameter:

- **Empowering Vulnerable Groups and Displaced Populations:** Our geospatial models map socio-demographic indicators to actively design out urban resource deserts. Spatial master plans must ensure that vulnerable groups, youth, and displaced populations have resilient, non-discriminatory physical access to public parks, clean drinking water, public transit nodes, and essential urban resources.
- **Co-designing Environmental Literacy Nodes:** Spatial designs are configured to host physical and digital community learning spaces. These nodes provide interactive, localized environmental literacy programs to bridge the digital and ecological divide, ensuring that residents of all backgrounds can interpret, use, and benefit from localized digital twin data.
- **Participatory Modeling:** We incorporate community-driven data into our GIS platforms to allow local stakeholders, specifically youth and historically marginalized populations, to actively participate in simulating, co-designing, and auditing urban green spaces.

4. Corporate Carbon Management

4.1. Comprehensive Scope 1, 2, and 3 Emissions Ledger

Yada Global establishes a legally binding corporate emissions management system. The Company mandates the annual calculation, reporting, and systematic reduction of its carbon footprint across all three operational boundaries in strict accordance with the Greenhouse Gas Protocol and the Partnership for Carbon Accounting Financials (PCAF):

- **Scope 1 (Direct Emissions):** The Company monitors and targets emissions from physical facilities, testing equipment, and mobile combustion assets. All direct combustion sources are targeted for progressive electrification by 2030.
- **Scope 2 (Indirect Emissions):** The Company monitors emissions associated with purchased electricity, heating, and cooling for its rented offices. The Company mandates that 100% of physical offices purchase electricity from certified green tariff renewable energy suppliers where available.
- **Scope 3 (Value Chain Emissions):** Since direct operational emissions are minor compared to value chain impacts, the Company establishes strict Scope 3 reporting boundaries covering employee commuting, downstream financed projects, and upstream green procurement.

Emissions Scope	Primary Boundary Sources	Target Reduction Milestone (by 2030)
Scope 1: Direct	Mobile combustion of corporate utility vehicles; direct physical facility gas heaters	100% Electrification & Elimination
Scope 2: Indirect	Purchased electricity, heating, and cooling for rented spatial planning offices	30% Net Intensity Reduction (MWh/m2)
Scope 3: Value Chain	Cloud data center hosting; employee commuting; downstream master planning project footprints	Mandatory PUE < 1.15; Look-through Assessment

4.2. "Digital-First" Meeting and Corporate Travel Policy

To eliminate unnecessary business travel—one of the largest contributors to professional services Scope 3 footprints—Yada Global establishes a legally binding "Digital-First" corporate travel policy:

- **Presumption of Virtual Meetings:** All internal group meetings, regional project reviews, and client consultations must occur virtually by default. Physical business travel is prohibited unless the traveler obtains a formal "Travel Exception Clearance" signed by their department head and the sustainability lead.
- **Mandatory Travel Offsetting:** For all unavoidable physical business travel, the booking department must calculate the precise carbon emissions using the verified GHG Protocol aviation and rail methodology. The Company mandates that **100% of unavoidable travel emissions** be offset through the corporate procurement of verified, certified Gold Standard or Verified Carbon Standard (VCS) carbon credits.

Scope 1, 2, and 3 Greenhouse Gas Boundary Matrix and Offset Protocols

4.3. Green Procurement & A+++ Infrastructure

The corporate procurement departments of Yada Global are bound by the following green purchasing mandates:

- **Energy Efficiency Standards:** All corporate computer monitors, computing hardware, and office appliances must meet the highest available energy efficiency classes. The procurement of office electronics is restricted exclusively to devices carrying the A+++ energy labeling or equivalent top-populated classes on the European Product Database for Energy Labelling (EPREL).
- **Office Infrastructure Refurbishment:** Any physical office expansion, lease, or renovation must comply with the Nearly Zero-Energy Buildings (NZEB) criteria. All physical renovations must target a minimum **30% reduction in Primary Energy Demand (PED)** compared to the pre-renovation baseline, validated through an official Energy Performance Certificate (EPC).
- **Chemical Restrictions (REACH & CLP):** All building materials, office furniture, paints, and solvents purchased by the Company must comply with Appendix C of the EU Taxonomy and the REACH Regulation. This ensures the complete exclusion of substances of very high concern (SVHCs), formaldehyde, and carcinogenic volatile organic compounds (VOCs).

5. Human-Centric Workspace

5.1. Compliance with ILO Core Conventions

Yada Global places the dignity, rights, and well-being of its workforce at the center of its ESG framework. The Company mandates absolute compliance with the International Labour Organization (ILO) Core Conventions:

- **Freedom of Association and Collective Bargaining:** Yada Global guarantees the absolute legal right of all employees to form, join, or assist workers' organizations of their choosing and to engage in collective bargaining without fear of discrimination, interference, or retaliation.
- **Eradication of Forced and Child Labor:** The Company maintains a zero-tolerance policy for child labor, forced labor, or modern slavery across all its operations, subsidiaries, and third-party subcontractors.
- **Non-Discrimination & Equal Opportunity:** All recruitment, pay structures, promotions, and working arrangements are governed strictly by the principles of equal opportunity, equal pay for equal work, and the absolute elimination of discrimination based on gender, race, religion, age, or disability.

5.2. Just Transition and Decent Work Integration

In accordance with the green and digital transition framework, the Company formally adopts the guiding principles of "Just Transition" as recognized under the National Employment Strategy, the 12th Development Plan, and the Climate Law:

- **Continuous Skill Adaptation:** The Company establishes a dedicated budget for "Green and Digital Skills Adaptation Programs" to provide continuous technical training for software developers, planning specialists, and administrative staff, ensuring labor market readiness for low-carbon business models.

- **Gender Empowerment:** Specific training quotas and mentorship initiatives are established to support the employment, leadership, and retention of women in technical, engineering, and cybersecurity roles, aligned with social equity strategies.

5.3. Legally Binding "Right to Disconnect"

As a modern IT and digital services firm, Yada Global recognizes that hyper-connectivity and the constant availability of digital systems pose significant risks to mental health, work-life balance, and employee retention. The Company hereby establishes a legally binding, audit-ready **Right to Disconnect** policy:

- **Core Operational Bylaw:** All employees, specifically within software development, GIS analysis, and project planning teams, have the legal right to disengage from all professional digital communication channels outside of their contractually specified working hours.
- **Absolute Restriction on Communications:** Managers, team leads, and peers are prohibited from sending, requiring responses to, or penalizing the non-receipt of corporate emails, Slack/Teams messages, or phone calls during the following designated times:
 - Contractual off-hours (from 18:00 to 08:00 local time).
 - Official weekends and national holidays.
 - Authorized personal and annual leave periods.
- **Exceptions Protocol:** The requirement to respond to communications outside contract hours is restricted exclusively to critical cybersecurity breaches, system-wide down failures, or life-safety emergencies. In such cases, any overtime worked must be contractually compensated at a premium rate or offset with paid time off.
- **Protection against Retaliation:** No employee shall face negative performance evaluations, promotion delays, or peer exclusion for actively exercising their Right to Disconnect. The HR department is mandated to perform bi-annual audits of corporate metadata to identify departments violating off-hours messaging restrictions, with violations subject to management-level review and correction.

ERGONOMIC WORKSPACE

**DUAL MONITORS
ADJUSTABLE DESK**

REST TIMELINE: RIGHT TO DISCONNECT

PROFESSIONAL CORPORATE FLAT DESIGN

Ergonomic Office Configurations and the Standard 24-Hour Right to Disconnect Clock

5.4. Cognitive and Ergonomic Well-being

To support high-performing technical teams, Yada Global implements a structured Cognitive and Ergonomic Well-being Program:

- **Ergonomic Workspace Mandates:** All physical workspaces must be configured with adjustable ergonomic chairs, height-adjustable standing desks, and flicker-free dual-monitor setups to prevent repetitive strain injuries and ocular fatigue.
- **Cognitive Load Management:** Teams managing high-stress workloads (such as systems operations and cybersecurity) must utilize structured sprint planning that restricts continuous focused development blocks to a maximum of 90 minutes, followed by mandatory cognitive breaks.
- **Mental Health Support:** Provide confidential, third-party professional counseling and burnout prevention workshops to all employees free of charge.

6. Entry into Force and Approval

This **Environmental and Sustainability Policy and Action Plan (2026–2030)** was approved and entered into force by **Yada Global Bilişim Planlama Proje Pazarlama İnşaat Sanayi ve Ticaret Limited Şirketi** on **July 1, 2026**.

This Policy and Action Plan sets forth Yada Global’s environmental sustainability approach, strategic objectives, and implementation principles. It is binding for all employees, executives, consultants, project teams, business partners, suppliers, and relevant parties acting on behalf of Yada Global within the scope of their duties and responsibilities.

Yada Global adopts the efficient and effective use of natural resources, reduction of environmental impacts, combatting climate change, waste management, energy efficiency, and the integration of

sustainable business practices into all its operations as a corporate commitment. The Company undertakes to comply with applicable environmental legislation, support international sustainability principles, and continuously improve its environmental performance.

This Policy and Action Plan shall be regularly monitored and updated as necessary in line with applicable legislation, national and international sustainability goals, technological developments, and corporate needs. The progress of the targets within the scope of the Policy shall be periodically evaluated by the management, and necessary improvement measures shall be implemented.

The most up-to-date version of this Policy and Action Plan shall be published through communication channels deemed appropriate by the Company and made available to employees, business partners, and other relevant stakeholders when required.

7. Policy References & Technical Anchors

This Policy and Action Plan is structurally anchored in the following official source materials and international regulatory frameworks:

- [1] European Commission, FAQ on the application of the Do No Significant Harm (DNSH) principle under the EU Taxonomy Regulation (Article 17 of Regulation EU 2020/852).
- [2] European Parliament and Council, Corporate Sustainability Reporting Directive (CSRD) and Corporate Sustainability Due Diligence Directive (CSDDD).
- [3] United Nations Development Programme (UNDP), ESG Disclosure Standards for Nonbank Financial Institutions and Environmental and Social Management Systems (ESMS).
- [4] European Bank for Reconstruction and Development (EBRD), Environmental and Social Policy & Performance Requirements (PRs).
